Re: WT Docket No. 06-203
Ex Parte Presentation

Dear Ms. Dortch:

On May 10, 2007, representatives from the Alliance for Telecommunications Industry Solutions (ATIS) Incubator Solutions Program 4 – Hearing Aid Compatibility (AISP.4-HAC) and advocates for consumers with hearing loss met with Barry Ohlson, Senior Legal Advisor for Commissioner Jonathan S. Adelstein. The purpose of the meeting was to explain the alternative proposal that was unanimously reached by AISP.4-HAC members and consumer advocates to the FCC's February 2008 mandate requiring that service providers and manufacturers make 50% of their wireless devices hearing aid compatible.

The individuals representing the AISP.4-HAC at this meeting were: Scott Kelley, Disability Access Manager, Motorola Mobile Devices Business; Harold Salters, Director, Federal Regulatory Affairs, T-Mobile USA, Inc.; Steve Coston, Technical Manager, Regulatory Project Office, Sony Ericsson Mobile Communications; Susan Mazrui, Director, Federal Regulatory, AT&T/Cingular; Praveen Goyal, Director, U.S. Government Relations, Research In Motion, Ltd.; James Turner, Technical Coordinator, ATIS; Deirdre Cheek, Attorney, ATIS; and Thomas Goode, General Counsel, ATIS. The advocates of consumers with hearing loss at this meeting were: Brenda Battat, Associate Executive Director, Hearing Loss Association of America; and Linda Kozma-Spytek, Research Audiologist, Technology Access Program, Gallaudet University.

The discussion at the meeting was consistent with the presentations that are enclosed with this letter. Pursuant to Section 1.1206(b)(2) of the Commission's

Participating Advocates for Consumers with Hearing Loss

- **Alexander Graham Bell Association for the Deaf and Hard of Hearing**
 - Gerri Hanna
- **Hearing Loss Association of America (HLAA)**
 - Brenda Battat
- **Gallaudet University Technology Access Program**
 - Judy Harkins and Linda Kozma-Spytek
- **RERC on Telecommunications Access**
 - Karen Peltz Strauss, Consultant

Why should the FCC change its existing rules?

- Industry cannot comply with the current rule on a technology-neutral basis.
- Need to enhance T-Coil availability for consumers who are most hard of hearing.
- Need to enhance the ability for consumers to benefit from new technology from the “get-go.”
- Need to address volume control.
- The Wireless Industry and Consumers have worked together for a win-win solution.

AISP.4-HAC Consensus Agreement Summary

Consumers and Industry propose:

- Revised minimum number of M phones
- Revised minimum number of T phones
- Industry study of Volume Control in the AISP.4-HAC Incubator
- Revisiting HAC requirements in 2010

Significance of the Consensus Proposal

- The struggle to achieve HAC telephones began in 1973.
- Federal oversight was previously required to achieve any agreement on HAC issues.
- The following represents the first consensus achieved voluntarily between consumers and industry on the wireless HAC issue.

AISP.4-HAC WG10 50% Alternative Proposal

March 21, 2007

Carriers' Commitment

Carriers' Commitment for M and T

1. Tier 1 Wireless Carriers will make available:

- Eight (8) in 2008, Nine (9) in 2009, Ten (10) in 2010 and Ten (10) in 2011 HAC M3-or-better models*

OR

- 50% of the portfolio M3-or-better

2. Tier 1 Wireless Carriers will make available:

- Three (3) in 2008, Five (5) in 2009, Seven (7) in 2010 and Ten (10) in 2011 HAC T3-or-better models*

OR

- 33% of the portfolio T3-or-better

* A *de minimis* exists for new technologies just entering the network and for old technologies being phased out, e.g. UMTS & TDMA (see next slide for examples). The FCC's current rules regarding the effects of *de minimis* manufacturers on carriers' commitments will remain unchanged.

Examples of Carriers' *De Minimis* Offerings

Total Models Offered	M3-or-Better Offered	T-Coil Offered
1	0	0
2	0	0
3	1	1
4	1	1
5	2	1
6	2	2

Carriers' Conclusions

Carriers Commit to:

- Offer minimum quantities of M-rated models greater than the five currently required.
- Offer minimum quantities of T-rated models going forward greater than the two currently required.
- Support product refresh.
- Report upon product tiering in annual reports to the FCC.
- Through *de minimis* requirements, offer HAC models in the event of new technology rollout and maintain HAC models in the event of technology sunset.
- Investigate audio output and volume control.
- Carriers agree with a 2010 review of the FCC's rules to take effect in 2012.

Other Assumptions:

- Assumes the FCC approves use of the C63.19-2007 Amendment concurrently with the C63.19-2006 Amendment through the end of 2009.
- Until future testing demonstrates the usability of phones that are fully "decoupled," T-Coil rated phones will continue to have a minimum of an M3 rating. However, decoupling is permissible for the purposes of rating phones and providing information about M and T ratings.
- When the usability of M1 and M2-rated devices is better understood, Carriers will revisit the labeling of those devices.

Manufacturers' Commitment

Manufacturers' M Commitment

- Beginning 2/18/08, all manufacturers would offer at least 33% (truncated) total U.S. models with the following:
 - M3-or-better per the latest version FCC-approved ANSI C63.19.
 - U.S. bands supported.
 - A range of models spanning multiple tiers and form factors.
 - Greater than 33% will be offered whenever it is readily achievable, assessed on a product-by-product basis.
 - No limit or cap on the number of HAC phones required because it is always based on a percentage of the total.
- The 33% minimum requirement will carry forward through 2011.

Manufacturers' M Commitment Examples

Proposed 33% Alternative
- Example offerings required of each vendor -

OVERALL TOTAL MODELS per air interface offered in U.S. in the HAC Report	33%	Minimum M3-or-better models required
3	1.00	1
4	1.33	2
5	1.67	2
11	3.67	3
15	5.00	5
19	6.33	6
21	7.00	7
24	8.00	8
27	9.00	9
30	10.00	10
Et cetera		

Manufacturers' M Refresh Commitment

- **Manufacturers would continually offer a mix of new or existing M3-or-better models. Beginning in 2009:**
 - For manufacturers that produce four (4) or more total models per air interface:
 - At least **one-half (1/2)** (rounded up) of the minimum required M3-or-better models would be **new** models introduced during that calendar year.
 - For manufacturers that produce three (3) total models per air interface:
 - The new model is introduced every other year.
 - In both cases the remaining M3-or-better models could be existing or new.
 - When a manufacturer has no plans to produce a new model in a calendar year, then HAC refresh would not be required.

Manufacturers' M Refresh Commitment Examples

Proposed new M3-or-better offerings
- Example offerings required of each vendor -

Overall Total Models Offered in HAC Report	Minimum M3-or-better models	Minimum new models M3-or-better (½ rounded up)	
3	1	1 every other year	
4-8	2	Every year	1
9-11	3		2
12-14	4		2
15-17	5		3
18-20	6		3
21-23	7		4
24-26	8		4
27-29	9		5
30-32	10		5
Et cetera...			

Manufacturers' T Commitment

- In 2008 - a minimum of two (2) T3-or-better models compliant with C63.19 – 2006 will be offered.
- In 2009* – A minimum of 20% (truncated) of four (4) or more total offered - T3-or-better
 - One (1) new model rated per the grandfathered C63.19 – 2006 may be offered during this year.
 - All other new models from this point forward will support the 20 dB S/N increase per C63.19-2007.
- In 2010 – 25% (truncated) of four (4) or more total offered - T3-or-better models per the C63.19-2007 Standard.
- In 2011 – 33% (truncated) of four (4) or more total offered - T3-or-better models per the C63.19-2007 Standard.

*Assumes the FCC approves use of the C63.19-2007 Amendment concurrently with the C63.19-2006 Amendment through the end of 2009.

Manufacturers' T Commitment Examples

TOTAL MODELS per air interface in HAC Report	Minimum T3-or-better required in 2008	Minimum T3-or-better required in 2009 (20%)	Minimum T3-or-better required in 2010 (25%)	Minimum T3-or-better required in 2011 (33%)
3	1	1	1	1
4	2	2	2	2
9	2	2	2	3
13	2	2	3	4
15	2	3	3	5
17	2	3	4	5
20	2	4	5	6
22	2	4	5	7
25	2	5	6	8
27	2	5	6	9

Manufacturers' Conclusions

Manufacturers commit to:

- Investigate audio output and volume control.
- Offer 33% (2008) of total models as M3-or-better rated.
- Support US Bands.
- Offer 33% (2011) of total models as T3-or-better rated devices.
- Make available quantities not limited to minimum values.
 - If “readily achievable,” more M3 and/or T3-or-better models will be offered.
 - All models ratings posted on the manufacturers’ web sites.
 - All models certified as passing FCC requirements will be labeled on the product box.
- Continually offer a mix of new or existing HAC models.
- Review HAC milestones in February 2010 to take effect in 2012.

AISP.4-HAC WG10 Conclusions

AISP.4-HAC Volume Control Commitment

- AISP.4-HAC will form a working group with participants from the Wireless Industry (Carriers and Manufacturers) and representatives of consumers with hearing loss to study audio output and volume control.
 - Statement of work by end of May 2007*
 - Report assessing the issues of audio output and volume control, and recommending an initial path forward by June 2008.*
- The working group will also specifically address the usability of phones by T-Coil users which contain T ratings of T3 or higher, but do not meet an M3 rating.
 - Recommendation by 2010 review of HAC milestones.

AISP.4- WG10 Conclusions

Carriers commit to:

- Offer minimum quantities of M-rated models greater than the five currently required.
- Offer minimum quantities of T-rated models going forward greater than the two currently required.
- Support product refresh.
- Report upon product tiering in annual reports to the FCC.
- Through *de minimis* requirements, offer HAC models in the event of new technology rollout and maintain HAC models in the event of technology sunset.
- Investigate audio output and volume control.
- Review HAC milestones in February 2010 to take effect in 2012.

AISP.4- WG10 Conclusions

Manufacturers commit to:

- Offer 33% of total models as M3-or-better rated.
- Support US Bands.
- Offer 33% of total models as T3-or-better rated devices.
- Make available quantities not limited to minimum values.
 - If “readily achievable,” more M3 and/or T3-or-better models will be offered.
 - All models ratings posted on the manufacturers’ web site.
 - All models certified as passing FCC requirements will be labeled on the product box.
- Continually offer a mix of new or existing HAC models.
- Review of HAC milestones in February 2010 to take effect in 2012.

AISP.4-WG10 Conclusions

Addresses noted consumer concerns on:

- Product refresh.
- Provision for new technologies.
- Support of US Bands.
- Importance of increasing the number of T-rated phones for those consumers who have greater hearing loss.
- Importance of increasing minimum numbers of M-rated phones for all consumers with hearing loss.
- Importance of investigating volume control for all consumers with hearing loss.
- Importance of variability in tiering of HAC phones for all consumers with hearing loss.

Represents a pinnacle effort in good faith on behalf of the Wireless Industry and Representatives of Consumers with Hearing Loss to reach consensus.
